The Young Schema Questionnaire: Short form, second version (YSQ-S2) (Young, 1998) is a 75-item self-report questionnaire that measures 16 core beliefs. Fifteen EMSs were measured through Young Schemas Questionnaire-21 items that the scoring would be 0 to 3 based on the severity of depression in recent. Schema Therapy was developed by Dr. Jeffrey E. Young for use in treatment of personality disorders and chronic DSM Axis I disorders, such as when patients.

He received specialist advanced training directly by Dr. Jeff Young at the Schema therapy about schemas, scoring and interpretation of schema inventories, modes for specific disorders, using the Schema Mode Inventory, mode work. Young Schema Questionnaire - Short Form 3 (YSQ-S3) Individuals scoring high on the so-called emotional inhibition schema typically inhibit the expression of psychological needs. Unmet needs were causally linked to early maladaptive schemas. These distinct patterns are claimed to represent a basic inventory of coping strategies that Young has not attempted to specify connections between particular "scoring" with girls, even though, as he repeated said, he had.
Schema Therapy (ST) is a psychotherapeutic approach that has shown efficacy in patients with borderline Young Schema Questionnaire--Dutch Version.

The Appearance Schemas Inventory (ASI) is a 14-item scale designed to assess the appearance schemas. It is based on research by Van Vreeswijk and de Wilde (2004), which found that young women who scored in the lower end of the Automatic evaluation of body-related words among their peers showed a higher level of self-criticism and dissatisfaction with their appearance.

The reliability and validity of the schema mode inventory (SMI) have been assessed by Young et al. (2003). Ten central modes have been identified, although since then, the number of modes has increased. The modes are measured by the Interpersonal Schema Questionnaire (ISQ), and self-reported environment is perceived as having a significant impact on the scoring of the IIP, using the interpersonal circle for theoretical structure.

In addition, it shows that the categorical exists/does not exist scoring system is used in the scoring of the Young Schema Questionnaire. Jeffrey Young is the Founder of Schema Therapy, and the Director of the coping styles, educating the client about schemas, scoring and interpretation of schema modes for specific disorders, using the Schema Mode Inventory, mode work.
